

REVELAROM

FINING AGENT TO PREVENT AND CURE REDUCTION ODOURS.

COMPOSITION

Copper organic salts in a protein and mineral matrix. Copper content: approx. 0.7 %

GENERAL FEATURES

Revelarom is a complex fining agent that effectively removes odours arising from sulphur compounds.

It is used to treat wine before bottling, to prevent the appearance of reduction aromas in bottle, and also those linked with light exposure (lightstrike).

In wines that already have closed or reduced odours, Revelarom eliminates atypical odours arising from hydrogen sulphide and its derivatives and consequently heightens fruity aromas.

Given its special formula, treatment with Revelarom is effective both for the prevention and cure of reduction odours without causing the negative collateral effects that are associated with copper sulphate and copper citrate usage. In fact, Revelarom not only improves the nose but also the taste since it:

- eliminates metallic tastes associated with copper treatments;
- reduces bitter tastes that arise from products resulting from reactions between sulphur and polyphenol compounds.
- prevents copper haze

APPLICATIONS

- Prevention of post bottling reduction
- Prevention of light-struck
- Aromatic cleansing of wines with evident reduction problems
- Aromatic opening of wines that are "closed" due to the presence of sulphur compounds.

DOSAGES

5 - 10 g/hL (0.4 - 0.8 lb/1000 gal) for preventative treatment before bottling

5 - 20 g/hL (0.4 - 1.7 lb/1000 gal) for curing

100 mg of product contain approximately 0.7 mg of copper,

It is advisable to complete preliminary laboratory trials to determine the optimal treatment dosage and test for residual copper content (wine final copper content must not exceed 1 mg/L according to the EU regulation).

INSTRUCTIONS FOR USE

Disperse REVELAROM in cold water (10-15°C or 50-59°F), in a 1:10 ratio, while mixing well to obtain a good dissolution. Allow the solution to rest for one hour and then add to the wine during a pump-over using a dosing pumps or Venturi tubes.

Wait 1-2 days for the product to settle well and then filter.

When Revelarom is used in combination with other fining agents, it is advisable to add it first to the wine, before other products.

PACKAGING AND STORAGE

1 kg bag

Sealed package: keep the product in a fresh, dry, well ventilated place.

Opened package: carefully reseal the package and store as above indicated.

Product approved for winemaking, in accordance with:

Regulation (EC) N. 606/2009

Codex Œnologique International
