

STABILIZING AGENTS

ENOCRISTAL Ca

Wine calcium stability

	<p>COMPOSITION Micronized calcium L-tartrate.</p>
	<p>GENERAL CHARACTERISTICS Enocrystal Ca is a micronized calcium tartrate selected for its chemical purity, sensory neutrality and microgranular structure.</p> <p>Due to the small size of its granules, Enocrystal Ca acts as a crystallization nucleus, triggers the formation of calcium tartrate crystals and promotes calcium stabilization process.</p> <p>Enocrystal Ca has no direct sensory effect, however the decrease in total acidity caused by treatment can have an impact comparable to that of cold treatment.</p>
	<p>APPLICATIONS</p> <ul style="list-style-type: none"> ▪ Wine calcium tartrate stabilization ▪ Reduction of wine calcium content
	<p>DOSAGE Recommended dosage: 50 g/hL Maximum legal dosage in the EU: 200 g/hL</p>
	<p>INSTRUCTIONS FOR USE Dissolve in wine at a ratio of 1:20 and add to wine during pump-over. Keep the product in suspension until complete homogenization in the entire volume of wine. Wine temperature must be between 10 - 15°C for the entire duration of the treatment. Cooling wine down to -4°C is not necessary. Leave Enocrystal Ca in contact with wine for 7-15 days. At the end of treatment, rack off and/or filter. For more information on the Enartis tartrate stabilization protocol, please refer to Enartis technical service.</p>
	<p>PACKAGING AND STORAGE CONDITIONS 5 kg, 25 kg</p> <p>Sealed package: store in a cool, dry, well-ventilated area. Opened package: carefully reseal and store as indicated above.</p>
	<p>COMPLIANCE The product is in compliance with: Codex Oenologique International</p> <p>Product <u>approved for winemaking</u>, in accordance with: Reg. (EU) 2019/934</p>

The indications given here correspond to the current state of our knowledge and experience, however they do not relieve the user from compliance with safety and protection regulations or from improper use of the product.
