

PHARMABENT

COMPOSITION

Pure sodium activated bentonite.

GENERAL FEATURES

Odorless white powder.

Pharmabent is a pharmaceutical grade bentonite. It is used in the treatment of musts and wines in consequence of its remarkable technical performance.

With its high charge and its extended adsorbent surface, Pharmabent is particularly effective in removing unstable protein also of lower molecular weight, and the unstable color. This helps reduce the dosage and minimize the impact on wine aroma and flavor.

APPLICATIONS

- Protein stabilization of white and rosé wines;
- Elimination of red wine unstable color;
- Wine and juice clarification.

INSTRUCTIONS FOR USE

- Dissolve one part of PHARMABENT into 20 parts of cold water, stirring continuously to avoid lumps.
- When an homogenous dispersion is obtained, keep on stirring for 15 minutes and then allow it rest for one hour.
- Mix again before adding to the volume to be treated
- Add to the juice/wine while pumping over, using a metering pump or a Venturi tube.

Full compliance with the instructions provided above ensure the best oenological efficiency of the product

DOSAGES

Average dosage: 5 - 10 g/hl, to be defined after protein stability test (i.e. heat test).

For dosage higher than 10 g/hl, split the addition in two fractions to be added 24-apart.

It is recommended to conduct laboratory trials first to determine optimum dosage.

PACKAGING AND STORAGE

5 kg

Sealed package: keep the product in a fresh, dry, well-ventilated area.

Opened package: carefully reseal the package and keep it as above indicated.

The product is in compliance with the following specifications:

Codex Œnologique International

Product approved for winemaking, in accordance with:

Reg. (EC) N.606/2009
